

Conglomerate Enterprise Pilot Blueprint

AgenThinkMesh Enterprise Platform v1.0

Document ID: PILOT-BLUEPRINT-CONGLOMERATE-v1.0 **Version:** 1.0 **Status:** APPROVED FOR PILOT USE **Date:** 3 August 2026 **Classification:** Internal — Pilot Configuration Reference

Purpose

This blueprint defines a reusable configuration template for deploying AgenThinkMesh at diversified conglomerate enterprises. It is designed to be instantiated for any large, multi-sector holding company operating across multiple geographies.

This document does not embed confidential assumptions about any specific organisation. All module configurations are parameterised and must be filled in during the self-service onboarding process.

1. Organisation Profile

Parameter	Description	Example Value
<code>org.name</code>	Legal entity name	Alghanim Industries
<code>org.slug</code>	URL identifier (lowercase, hyphens)	alghanim-industries
<code>org.plan</code>	Subscription plan	enterprise
<code>org.industry</code>	Primary industry classification	Conglomerate
<code>org.geography</code>	Primary operating geography	Kuwait / GCC
<code>org.governanceProfile</code>	Data governance tier	CONFIDENTIAL
<code>org.dailyTokenLimit</code>	Daily LLM token allocation	1,000,000
<code>org.approvedDomains</code>	Authorised email domains	@[company].com

2. Department Structure

The following departments are recommended for a diversified conglomerate. Select and configure based on the actual organisational structure.

Department	Slug	Primary Use Case
Corporate Strategy	corporate-strategy	M&A screening, strategic planning
Procurement	procurement	Vendor risk, supplier evaluation
Finance	finance	Capital allocation, budget decisions
Operations	operations	Operational efficiency, capacity planning
Human Resources	human-resources	Talent decisions, workforce planning
Technology	technology	Digital transformation, IT investment
Legal & Compliance	legal-compliance	Regulatory risk, contract review
Risk Management	risk-management	Enterprise risk, scenario analysis

3. Decision Twin Configuration

3.1 Module: M&A Screening

Purpose: Evaluate acquisition targets against strategic fit, financial health, and governance risk.

Parameter	Value
Blueprint ID	bp-alghanim or bp-core42
Instance Slug	[org-slug]-ma-screening
Display Name	M&A Screening Decision Twin
Council Mode	gcc (for GCC-based conglomerates)
Governance Profile	CONFIDENTIAL
Primary KPI Set	kpi-gcc-conglomerate
Ontology	ont-gcc-enterprise

Decision types supported:

- Strategic acquisition evaluation
- Minority stake investment
- Joint venture assessment
- Asset divestiture

3.2 Module: Capital Allocation

Purpose: Evaluate capital deployment decisions across business units and investment opportunities.

Parameter	Value
Blueprint ID	bp-alghanim or bp-uic
Instance Slug	[org-slug]-capital-allocation
Display Name	Capital Allocation Decision Twin
Council Mode	gcc
Governance Profile	CONFIDENTIAL
Primary KPI Set	kpi-gcc-conglomerate

Decision types supported:

- Capital budget allocation
- Business unit investment
- Infrastructure investment
- Financial instrument selection

3.3 Module: Vendor Risk

Purpose: Evaluate vendor relationships, procurement decisions, and supply chain risk.

Parameter	Value
Blueprint ID	bp-alghanim or bp-sami
Instance Slug	[org-slug]-vendor-risk
Display Name	Vendor Risk Decision Twin
Council Mode	gcc
Governance Profile	STANDARD
Primary KPI Set	kpi-gcc-procurement

Decision types supported:

- Vendor qualification
- Contract renewal evaluation
- Sole-source justification
- Supplier risk assessment

3.4 Module: Procurement (Optional)

Purpose: Evaluate large procurement decisions and competitive tender outcomes.

Parameter	Value
Blueprint ID	bp-alghanim
Instance Slug	[org-slug]-procurement
Display Name	Procurement Decision Twin
Council Mode	gcc

3.5 Module: Operations (Optional)

Purpose: Evaluate operational decisions including capacity, efficiency, and process change.

Parameter	Value
Blueprint ID	bp-core42
Instance Slug	[org-slug]-operations
Display Name	Operations Decision Twin
Council Mode	gcc

3.6 Module: Executive Reporting (Optional)

Purpose: Generate executive-level decision summaries, board packs, and governance reports.

Parameter	Value
Blueprint ID	bp-agentthink
Instance Slug	[org-slug]-executive
Display Name	Executive Decision Twin
Council Mode	gcc
Governance Profile	CONFIDENTIAL

4. Data Source Connector Placeholders

The following data sources are typically required for a diversified conglomerate. All connections are configured after provisioning.

Source Name	Type	Classification	Owner	Purpose
ERP Financial Data	SQL	Confidential	Finance	Balance sheet, P&L, cash flow
Procurement Reports	Excel	Internal	Procurement	Vendor performance, contract data
Market Intelligence	REST	Internal	Strategy	Competitor and market data
HR Workforce Data	SQL	Confidential	HR	Headcount, compensation, attrition
Operations Dashboard	REST	Internal	Operations	KPIs, throughput, capacity
Legal Contract Register	Excel	Restricted	Legal	Active contracts, renewal dates

5. Role Structure

Role	Slug	Permissions	Twin Access
Enterprise Admin	enterprise-admin	<code>["*"]</code>	<code>["*"]</code>
Decision Analyst	decision-analyst	<code>["twin.run", "twin.view", "report.view"]</code>	All deployed twins
Executive Viewer	executive-viewer	<code>["twin.view", "report.view"]</code>	All deployed twins
Department Head	dept-head	<code>["twin.run", "twin.view", "report.view"]</code>	Department twins only
Auditor	auditor	<code>["audit.view", "report.view"]</code>	Read-only

6. Governance Settings

Setting	Recommended Value	Notes
Governance Profile	CONFIDENTIAL	For financial and strategic decisions
Audit Logging	Enabled (all actions)	Required for enterprise certification
Council Mode	<code>gcc</code>	Appropriate for GCC-based conglomerates
Session Retention	90 days	Configurable per regulatory requirement
Outcome Ledger	Enabled	Required for calibration and proof

7. Onboarding Sequence

The recommended onboarding sequence using the `/enterprise/setup` wizard:

1. **Organisation Details** — Name, slug, plan (enterprise), governance profile (CONFIDENTIAL), approved domains

2. **Departments** — Select: Corporate Strategy, Procurement, Finance, Operations (minimum); add others as needed
3. **Administrator** — Assign the Chief Digital Officer or equivalent as first admin
4. **Users & Roles** — Plan: 5–20 initial users across departments
5. **Decision Twins** — Deploy: M&A Screening, Capital Allocation, Vendor Risk (minimum for pilot)
6. **Data Sources** — Register: ERP Financial Data, Procurement Reports, Market Intelligence (as placeholders)
7. **Review** — Verify all configuration before provisioning
8. **Provision** — Execute atomic provisioning
9. **Confirmation** — Record enterprise URL, share with administrator

8. Pilot Acceptance Criteria

The pilot is considered successful when:

Criterion	Verification Method
Non-developer provisioned the organisation	Onboarding rehearsal report
Three Decision Twins deployed	Enterprise Dashboard → Twin Instances
First administrator can log in	Login test
Test decision submitted and council ran	Session log
Report generated	Report viewer
Decision written to Outcome Ledger	Outcome Ledger query
Audit log captures full process	Audit log review
Tenant isolation verified	CR-1 test suite
Platform stable under benchmark load	CR-6 benchmark report

9. Reuse Instructions

To instantiate this blueprint for a new conglomerate enterprise:

1. Navigate to `/enterprise/setup`
2. In Step 1, enter the organisation name — the slug will be auto-generated
3. Select the appropriate plan (enterprise for production pilots)
4. In Step 2, select the departments from the suggested list or add custom ones
5. In Step 5, select the Decision Twin modules relevant to the organisation's priorities
6. In Step 6, register data source placeholders with the appropriate classification
7. Complete provisioning — no engineering assistance required

Do not embed organisation-specific confidential data in this blueprint. All sensitive configuration is entered during the wizard and stored in the database under the organisation's tenant boundary.
