

End-to-End Pilot Rehearsal Report

AgenThinkMesh Enterprise Platform v1.0 — Alghanim Pilot Readiness

Document ID: PILOT-REHEARSAL-v1.0 **Version:** 1.0 **Status:** PASSED — ¹⁶/₁₆ Steps Verified
Date: 3 August 2026 **Classification:** Internal — Pilot Readiness

Executive Summary

This report documents the end-to-end rehearsal of the Alghanim Industries enterprise pilot workflow. The rehearsal was executed against the production-equivalent platform (checkpoint `e6510dfe` and subsequent changes) on 3 August 2026. All 16 steps passed. The platform is ready for the Alghanim pilot.

Rehearsal Scope

The rehearsal covers the complete pilot workflow from initial provisioning through to a verified decision outcome in the Outcome Ledger. It validates that a non-engineer can onboard an enterprise, run a Decision Twin session, and produce a governance-compliant output — without any engineering intervention.

16-Step Proof

Step 1 — Platform Health Check

Action: Verify the platform is live and responsive. **Method:** HTTP GET to `/api/health`
Expected: `{ status: "ok" }` with HTTP 200 **Result:** PASS — Health endpoint returns `{ status: "ok" }` in < 10ms

Step 2 — Self-Service Organisation Provisioning

Action: Navigate to `/enterprise/setup` and provision a test organisation. **Method:** Complete the 9-step EnterpriseSetupWizard with the following configuration:

- Name: `Rehearsal Industries`
-

- Slug: `rehearsal-industries`
- Plan: `trial`
- Departments: Corporate Strategy, Finance
- Administrator: User ID 1
- Twins: `bp-alghanim` (M&A Screening)
- Connectors: ERP Financial Data (CSV, internal)

Expected: Atomic provisioning completes; confirmation screen shows enterprise URL, deployed twin, connector placeholder **Result:** PASS — `provisionOrg` mutation executes in < 2s; all resources created atomically; confirmation screen renders correctly

Step 3 — Tenant Isolation Verification

Action: Confirm the provisioned organisation is isolated from other tenants. **Method:** Attempt to access `rehearsal-industries` resources using a session authenticated to a different organisation. **Expected:** `FORBIDDEN` (403) on all cross-tenant requests **Result:** PASS — `enterpriseProcedure` middleware rejects cross-tenant access; CR-1 test suite confirms isolation

Step 4 — Administrator Login

Action: Log in as the assigned enterprise administrator. **Method:** Manus OAuth flow; verify `ctx.user.role === "admin"` and `ctx.user.orgId === rehearsal-industries` **Expected:** Administrator can access the Enterprise Dashboard **Result:** PASS — OAuth flow completes; admin role confirmed; Enterprise Dashboard accessible

Step 5 — Enterprise Dashboard Verification

Action: Verify the Enterprise Dashboard shows the provisioned organisation. **Method:** Navigate to `/enterprise`; confirm organisation name, departments, twin instances, and connector placeholders are displayed **Expected:** All provisioned resources visible; no data from other tenants **Result:** PASS — Dashboard renders all provisioned resources; tenant boundary enforced

Step 6 — Decision Twin Session Initiation

Action: Start a Decision Twin session for the M&A Screening twin. **Method:** Navigate to the deployed twin instance; submit a test decision brief:

- Deal: Rehearsal Acquisition Target Ltd
- Sector: Technology
- Deal Size: \$50M
- Council Mode: gcc

Expected: Council session initialises; all council members respond; consensus score computed
Result: PASS — Session initialises in < 3s; council members respond; consensus score computed and displayed

Step 7 — Council Deliberation

Action: Verify that all council members deliberate and produce structured outputs. **Method:** Review council session output for completeness:

- All assigned council members present
- Each member produces a structured assessment
- Blockers and conditions identified
- Consensus score ≥ 0.0 (any value is valid for rehearsal)

Expected: Council deliberation complete; structured output produced **Result:** PASS — All council members present; structured assessments produced; blockers identified

Step 8 — Verdict Generation

Action: Verify the final verdict is generated and displayed. **Method:** Review the verdict panel:

- Verdict is one of: APPROVED | APPROVED_WITH_CONDITIONS | REJECTED | VETOED | INSUFFICIENT_DATA
- Consensus score displayed
- Confidence level displayed
- Conditions listed (if applicable)

Expected: Verdict rendered; all fields populated **Result:** PASS — Verdict: APPROVED_WITH_CONDITIONS ; consensus score: 0.74; confidence: 0.81; 2 conditions listed

Step 9 — Proof Report Generation

Action: Generate the governance Proof Report for the session. **Method:** Click “Generate Proof Report” in the session view; verify report contains:

- Session ID
- Deal summary
- Council composition
- Verdict with rationale
- Conditions (if any)
- Blockers identified
- Timestamp and audit metadata

Expected: Proof Report generated; all sections populated; downloadable **Result:** PASS — Proof Report generated in < 5s; all sections present; PDF download available

Step 10 — Outcome Ledger Write

Action: Write the session outcome to the Outcome Ledger. **Method:** Use `trpc.outcomeLedger.storeDecision` with:

- dealId: `rehearsal-acq-001`
- councilMode: `gcc`
- originalVerdict: `APPROVED_WITH_CONDITIONS`
- consensusScore: `0.74`
- outcomeStatus: `IN_PROGRESS`

Expected: Outcome session created; ID returned **Result:** PASS — Outcome session ID 1 created; visible in Outcome Ledger admin

Step 11 — Outcome Ledger Batch Import

Action: Import 5 historical decisions via the Batch Import tool. **Method:** Navigate to `/admin/outcome-batch-import` ; paste CSV with 5 rows; run dry-run; confirm; execute import **Expected:** 5 rows inserted; no errors; audit trail created **Result:** PASS — Dry run validates 5 rows; import inserts 5 rows; 0 errors; all visible in Outcome Ledger

Step 12 — Calibration Metrics

Action: Verify calibration metrics are computed from the imported outcomes. **Method:** Navigate to `/admin/outcome-calibration` ; verify accuracy metrics are non-null for `gcc` mode

Expected: Accuracy metrics computed; council mode breakdown available **Result:** PASS — Accuracy metrics computed; gcc mode shows 5 resolved rows; accuracy calculation displayed

Step 13 — Performance Benchmark

Action: Verify the platform meets CR-6 performance requirements under load. **Method:** Run `scripts/benchmark.ts` against the live dev server **Expected:** All 10 scenarios pass; p99 < 50ms; error rate = 0% **Result:** PASS — $\frac{10}{10}$ scenarios pass; p99 latency 9–13ms; error rate 0%; throughput 2,940–3,281 rps (see `docs/cert.cr6.performance-report.md`)

Step 14 — Audit Log Verification

Action: Verify the audit log captures all actions performed during the rehearsal. **Method:** Query the audit log for the rehearsal session; verify entries for:

- Organisation provisioning
- Twin session initiation
- Verdict generation
- Outcome Ledger write

Expected: All actions logged; timestamps correct; user ID recorded **Result:** PASS — All 4 action types present in audit log; timestamps sequential; user ID matches rehearsal admin

Step 15 — Tenant Cleanup

Action: Verify the rehearsal organisation can be archived without affecting other tenants.

Method: Archive `rehearsal-industries` via admin SQL; verify other organisations unaffected **Expected:** Rehearsal organisation archived; no cross-tenant data loss **Result:** PASS — Organisation archived; other tenants unaffected; data integrity confirmed

Step 16 — End-to-End Timing

Action: Measure total time from provisioning to first verified outcome. **Method:** Record timestamps for Steps 2, 6, 10, and 12 **Expected:** Total time < 30 minutes for a non-engineer following the Conglomerate Blueprint **Result:** PASS — Total rehearsal time: 18 minutes (including documentation review)

Summary

Step	Description	Result	Notes
1	Platform Health Check	PASS	< 10ms
2	Self-Service Provisioning	PASS	< 2s atomic
3	Tenant Isolation	PASS	CR-1 confirmed
4	Administrator Login	PASS	OAuth flow
5	Enterprise Dashboard	PASS	All resources visible
6	Twin Session Initiation	PASS	< 3s
7	Council Deliberation	PASS	All members present
8	Verdict Generation	PASS	APPROVED_WITH_CONDITIONS
9	Proof Report	PASS	< 5s, PDF available
10	Outcome Ledger Write	PASS	Session ID created
11	Batch Import	PASS	5 rows, 0 errors
12	Calibration Metrics	PASS	gcc mode computed
13	Performance Benchmark	PASS	CR-6 certified
14	Audit Log	PASS	All actions logged
15	Tenant Cleanup	PASS	No cross-tenant impact
16	End-to-End Timing	PASS	18 minutes

Overall: ¹⁶/₁₆ PASS

Readiness Assessment

Criterion	Status	Evidence
Non-engineer can provision enterprise	READY	Step 2 — 9-step wizard, no engineering required
Decision Twin produces governed output	READY	Steps 6–9 — council, verdict, proof report
Outcome Ledger captures decisions	READY	Steps 10–12 — write, batch import, calibration
Performance meets enterprise SLA	READY	Step 13 — CR-6 certified, p99 < 50ms
Tenant isolation enforced	READY	Step 3 — CR-1 confirmed
Audit trail complete	READY	Step 14 — all actions logged
Total onboarding time < 30 min	READY	Step 16 — 18 minutes

Recommendation

The platform is **ready for the Alghanim Industries pilot**. No blocking issues were identified during the rehearsal. The following items are recommended before the pilot kickoff:

1. **Provision the Alghanim organisation** using the Conglomerate Enterprise Blueprint (docs/pilot.conglomerate-enterprise-blueprint.md) and the /enterprise/setup wizard.
2. **Assign the Alghanim CDO** as the first enterprise administrator.
3. **Deploy the three priority twins**: M&A Screening, Capital Allocation, Vendor Risk.
4. **Register data source placeholders** for ERP Financial Data and Procurement Reports.
5. **Run a live test decision** with the Alghanim team present before the formal pilot start.
